

A₁
concluded --20. (New) A method as claimed in claim 19, wherein assembling a print substrate further comprises coupling the smaller print segments together into the single substrate, and coupling an attachment member along at least one side of the single substrate.--

--21. (New) A method for printing an image on oversized print media on a printing apparatus having a transportation system; a printing station; a smoothing device, comprising a horizontal bed and an elevating means; and a platform; the copy of the image being received by a printer from a client, comprising:

assembling a single print substrate, wherein the single print substrate comprises a plurality of smaller print segments;

editing and adjusting the print parameters for the image;

scanning the image and storing the image on a storage medium;

printing the image onto the preassembled single print substrate; and

delivering the printed substrate to the client.--

--22. (New) A method as claimed in claim 21, wherein assembling a print substrate further comprises coupling the smaller print segments together into the single substrate, and coupling an attachment member along at least one side of the single substrate.--
